

SQL Database for Beginners

Lab Exercise 10

- 1) Open two instances of the query editor as shown during the lecture.
- 2) Execute a query returning all records in the project table in both editors.
- 3) Execute a query in the first editor starting a transaction.
- 4) Execute a query in the first editor adding a new project "twitter" to the project table.
- 5) Execute the query returning all records in the project table again in both editors and verify whether the results include the just added project.
- 6) Execute a query in the first editor terminating the transaction.
- 7) Execute the query returning all records in the project table again in both editors and verify whether the results include the just added project.
- 8) Repeat steps 3 to 5.
- 9) Execute a query in the first editor finalising the transaction.
- 10) Execute the query returning all records in the project table again in both editors and verify whether the results include the just added project.
